Subject: RE: Arkema Project Area - Proposed "No Coring Buffer Area" around the Sewer Pressure Main

Good Morning Eron and Mike,

EPA reviewed the proposal and I have the following requests:

- Consider relocating SC-13 and SC-14 closer (downstream) to the sewer line 50-ft buffer line. This may include moving 50-ft or so because with this new information about the proposed buffer it is more important to delineate contamination closer to the sewer line than sticking to the fixed 150-ft grid.
- The language on page 3 should be reconsidered: "This buffer would apply to any future subsurface (i.e., greater than 1 ft below mudline) work proposed in subsequent phases of investigation or remediation." It appears to commit to future design decisions; committing to this buffer for remediation is premature and requires additional discussion with EPA. Further, this level of commitment is not necessary to proceed with the proposed work.

Please let me know if you have any questions.

Subject: Arkema Project Area - Proposed "No Coring Buffer Area" around the Sewer Pressure Main

Hi Jeremiah and Dawn,

Attached is a memorandum that summarizes the work completed to locate the City of Portland's pressure sewer main located just upstream of the BNSF railroad bridge near river mile 6.9. The geophysical work was conducted by David Evans and Associates on behalf of Retia Inc., agent for Arkema. The memorandum includes a proposed "no coring buffer area" around the sewer.

Please let me know if the "no coring buffer area" is acceptable to you as soon as possible but no later than March 14. The coring work is scheduled to begin the week of April 4.

Please let me know if you have any questions or if you would like me to set up a Teams meeting to discuss the memorandum.

Thanks!
